Education

Jain University
Sep. 2022 – Jun 2026
Bachelor of Technology in Aerospace Engineering
Bengaluru, Karnataka

Relevant Coursework

- Aerospace Structures
- Rocket Propulsion
- Flight Dynamics
- Aerospace Vehicle Design
- Space Dynamics
- Composite Material
- Space Technology
- CAD,CAE,CAM,CFD,FEM,GD&T

Experience

Verve Visions
Jul 2025 – Present
Aerodynamics Research Intern
Bengaluru, Karnataka

- Conducted aerodynamic performance analysis of aerofoil models using CFD simulations, analytical methods, and wind tunnel testing to evaluate lift, drag, and pressure distribution.
- Designed and fabricated 3D-printed prototypes with integrated pressure vents; assessed SLM limitations and explored sustainable materials to enhance accuracy and fidelity.
- Led iterative design, prototyping, and testing cycles, optimizing trade-offs between aerodynamic efficiency and manufacturing feasibility.

CSIR-NAL
Jun 2024 – Jul 2024
Student Intern
Bengaluru, Karnataka

- Gained hands-on experience in CAD modelling and drafting of aerospace components using CATIA V5 and DraftSight; applied GD&T, tolerance analysis, and aerospace drawing standards to ensure precision and manufacturability.
- Acquired practical exposure to composite part manufacturing processes including layup, debulking, bagging, curing, and non-destructive testing (NDT).
- Collaborated with scientists at CSIR–NAL on tool design for composite structures, addressing spring-in phenomena and tooling challenges.

Projects

Final Year Project- BWB Aircraft structural design optimization | Catia, MSC Nastran

- Will Design a 365-seat BWB passenger aircraft using CATIA for geometric modelling and structural layout.
- Will Perform structural analysis in MSC Nastran to evaluate stress distribution, load paths, and efficiency.
- Will Optimize weight and performance with PW4000-94 engine selection balancing thrust, payload, and efficiency

Re-design of composite tail drive shaft of a typical helicopter | Ansys

- Designed and analyzed a composite helicopter tail drive shaft, benchmarking carbon/epoxy against metals.
- Optimized fiber orientation, stacking sequence, and elastomeric flange integration to enhance performance.
- Performed FEM in ANSYS to validate torsional loads, deformation, and shear stresses versus metallic shafts.

3D printing of MIchael selige aerofoil | Catia, 3d Printing

- Designed and tested Michael Selig aerofoils using CFD, wind tunnel, and manual calculations.
- Created 3D-printed aerofoils with pressure vents, addressing SLM and surface challenges.
- Explored sustainable materials to optimize manufacturability while maintaining aerodynamic performance

Skills

- Catia
- Siemens NX
- GD & T
- Open Rocket

Leadership

Aeronautical Society Of India
Jul 2024 – Present
Vice President - Student chapter
Jain University

- Coordinated and led technical workshops, seminars, and events, fostering engagement and learning among society members.
- Collaborated with team members to plan initiatives, manage logistics, and promote aeronautical projects and activities at the university level.

Extracurricular

IIT - Kanpur
16 Mar. 2025 – 26 Mar 2026

Introduction to Experiments in Flight

Kanpur, Uttar Pradesh

- Conducted aircraft experiments to determine parameters like center of gravity, drag polar, and climb performance.
- Calibrated control surfaces and analyzed flight data using MEMS-based sensors and flight data recorders.
- Applied least squares and delta methods for aerodynamic parameter estimation and stability analysis

Jain University
2 Mar 2024 – 3 Mar 2024

Fixed Wing UAV Workshop

Bengaluru, Karnataka

- Built a functional fixed-wing UAV model from form sheets, assembling all structural components.
- Integrated motor control systems and electronics to enable powered flight and maneuverability.
- Conducted test flights, evaluating stability, control response, and overall UAV performance.

Hindustan Institute Of Technology (HIT)
19 Feb 2024 – 21 Feb 2024

Advancement in Aerospace Structural Design

Chennai, Tamilnadu

- Engaged in advanced discussions on aerospace structural design, focusing on materials, manufacturing techniques, and damage tolerance.
- Collaborated with industry experts and academics to explore innovations in aircraft structural integrity and performance.
- Participated in hands-on sessions and case studies, enhancing practical knowledge in modern aerospace engineering practices.
